

## Creating a Happy and Comfortable Place to Work

**Kiewit Requirements:** When Kiewit decided to build a new facility to replace its outdated Santa Fe Springs district office, they had one primary goal, to create a pleasant and comfortable place for their employees to work. The new, two-story, building which was built adjacent to their existing site, was to be a showpiece for Kiewit district offices nationwide. As an employee owned company, Kiewit required the new district office to have full amenities for employees while creating an inviting space for vendors and clients.

**IOS Solutions:** During the design process, the IOS design team became a part of the Kiewit family. They listened to Kiewit's ideas and needs and incorporated them into the overall programming of the space. The IOS design team designed every aspect of the space, from the overall layout of the lobby and offices to the utensils used in the kitchen. Knowing that comfort was paramount, IOS chose the Haworth "Compose" and "Masters" product for it's versatility and outstanding craftsmanship. The result is a warm, inviting space that is a showpiece for the corporation and is a comfortable place for employees to work. Kiewit was so pleased with the results, they have since engaged IOS to work on several other district office renovation projects nationwide.

### PROJECT SPECIFICS:
